

## **Certificate and Non-Degree Seeking Goal Statement Instructions**

Your Goal Statement is crucial in helping us better understand our applicants and determine how well our program matches up with their expectations. Use your goal statement as a narrative to describe your past education, experience, and current professional career objectives. This document will be reviewed by our admissions committee not only as a source of information but also as an example of your writing ability. It is important to be as specific as possible in addressing these topics:

- Your interest in the specific program to which you are applying
- Your current educational or work experience
- Your professional goals in the informatics field
- How you envision these goals can be achieved through study here at McWilliams School of Biomedical Informatics.

If there are other items relevant to your application that you wish to share in your goal statement, please feel free to include those as well. The Admissions Team strongly encourages former McWilliams School of Biomedical Informatics students to address why they left the school and are seeking re-admission.
