

TASK 8 – MED ALLERGY LIST: MODIFY (LAURA)

Laura, a 44-year old female, presents with a swollen, red throat. You run a rapid-Strep test, which returns positive for *streptococcal group A antigen*. You believe that penicillin would be best for treatment. However, you note that her record states that she has a mild penicillin allergy. You discuss this allergy with Laura, and she states that she has had numerous penicillin-based drugs in the past few years without any issues. The inclusion of penicillin is likely a clerical error, so your task is to update her allergy list to reflect this.

1. Navigate to the full allergy list to modify the penicillin allergy to reflect that is no longer valid, and then verbally state when you believe that the record modification has been completed.

Table 1. Allergy Information	
Drug Name/Class	Penicillin class
Allergy Status	Invalid/Clerical Error
